REVIEWER INDEX

to Volume 132, September–December, 1992

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 132. The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant, making sure the presentation is accurate, unambiguous and easily readable. For this, we depend heavily on our reviewers, who perform this indispensable service without reward. The quality of the journal strongly reflects the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

Adams, A.
Alleman, M.
Alstad, D.

SUBJECT INDEX

to Volume 132, September–December 1992

Accessory gland, male, *Mst26* polymorphism and divergence, *Drosophila*, 755
Achiasmatic pairing, intergenic space repeats, male meiosis, *Drosophila melanogaster*, 529
Acipenser transmontanus, 221
Actin, systematic mutational anaylsis, *ACT1* gene, yeast, 337
Aedes albopictus, 205
Alanine, systematic mutational analysis, *ACT1* gene, yeast, 337
Alcohol dehydrogenase
  electrophoretically monomorphic protein, molecular population genetics, *Drosophila pseudoobscura*, 163
  estimates of gene flow, *Drosophila pseudoobscura*, 471
Allele
  gypsy-induced, *Hairy-wing* mutations, *Drosophila melanogaster*, 691
  mitotic and meiotic defects, yeast DNA helicase mutants, 23
  multilocus frequency data, inferring selective history, 277
  mutant, *myospheroid*, *Drosophila melanogaster*, 519
  Neurospora crassa A mating type mutants, repeat induced point mutation, 125
Allozyme, electrophoretic variants of G6PD, *in vivo* flux differences, *Drosophila melanogaster*, 783
Annealing, simulated, chromosome reconstruction, binary scoring, 591
Apolipoprotein B, hypertriglyceridemia and, control of, rabbit genetic model, 1095
Arabidopsis, direct repeat, somatic and germinal recombination, 553
Aspergillus nidulans, 591
Atherosclerosis, control of hypertriglyceridemia and apolipoprotein B, genetic model rabbits, 1095
Axon, guidance and outgrowth, *unc-33* gene, *Caenorhabditis elegans*, 675
Azotobacter vinelandii, 869

Bacteria
  Azobacter vinelandii, gene dosage analysis, 869
  Rhizobium meliloti genes, sulfate activation, 899
  transduction, 291
  unorthodox mating behavior, 635
Borrelia hermsii, multiple copies of its chromosome, linear plasmids, 311

Caenorhabditis elegans, 431, 675
CCR4 protein, leucine-rich repeat region, *ADH2* gene expression, yeast, 951
Cell cycle
  recombinational repair in yeast, sister chromatids as substrates, 387
  yeast mutagenesis, molecular genetic studies, cdc7 protein kinase, 53
Centromere
  fixed between-population differences, DNA polymorphism, *Drosophila ananassae*, 1039
  yeast mutants, defects in kinetochore structure and function, colony color assay, 39
Chi, enhancement of heteroduplex DNA levels, recombination, *Escherichia coli*, 879
Chlamydomonas reinhardtii, 413
Chloroplast, recombination events, nonrandom distribution, *Chlamydomonas reinhardtii*, 413
Chromatin
  domain formation, intrinsic differences, *Drosophila melanogaster*, 1063
  SPT4/SPT5/SPT6 interactions, transcription and viability, yeast, 325
Chromosome
  inversion and translocation, rescue of inviable deficiency progeny of *Neurospora crassa*, heterokaryons, 403
  multiple copies, linear plasmids, *Borrelia hermsii*, 311
  reconstruction, simulated annealing, binary scoring, 591
  transplantation, somatic cell hybridization, 1
Chromosome *11*, polar-lethal *ovum mutant* gene, mapping to distal portion, mouse, 241
Chromsome *X*, heterochromatin, copies of *Stellate* gene variant, *Drosophila melanogaster*, 1033
Cladogram, analysis of phenotypic associations, haplotypes, DNA sequence data, 619
Cod, heteroplasmy of short tandem repeats, mitochondrial DNA, 211
Colony color assay, yeast kinetochore mutants, 39
Compartmentation, cytoplasmic and mitochondrial histidyl-tRNA synthetase, *HTS1*, yeast, 987
Cowpea, RFLP mapping, orthologous seed weight genes, 841
Cytogamy, uniparental, tetrahymena, 1017
Cytoplasm
  histidyl-tRNA synthetase, *HTS1*, yeast, 987
  incompatibility and mtDNA variation, natural *Drosophila simulans* populations, 713
  paternal inheritance, pollen and seed migration, plants, 253
Cytoskeleton, systematic mutational analysis, *ACT1* gene, yeast, 337

Disequilibrium, inferring selective history, multilocus frequency data, 277
Divergence, polymorphism and, population genetics,

DNA
complementary, *GAL1*-regulated yeast, gene overexpression and lethality, 665
dopa decarboxylase activity, *Ddc* gene, *Drosophila melanogaster*, 443
double-strand breaks, extrachromosomal recombination, mammalian cells, 1081
formation of chromatin domains, intrinsic differences, *Drosophila melanogaster*, 1063
helicase mutants, mitotic and meiotic defects, yeast, 23
heteroduplex, enhancement by Chi, recombination in *E. coli*, 879
homologs of bacterial HexA and MutS mismatch repair proteins, two yeast genes, 963
inversions between short inverted repeats, *Escherichia coli*, 295
mismatch inhibited repair opportunity, evolutionary consequences, 567
mitochondrial
cytoplasmic incompatibility, natural *Drosophila simulans* populations, 713
haplotypes in laboratory cage populations, mosquito, 205
heteroplasmy of short tandem repeats, Atlantic cod, 211
length variation and heteroplasmy, white sturgeon, 221
polymorphism, fixed between-population differences, centromeric region of *Drosophila ananassae*, **31**:1039
repair
evolution of transformation, *Haemophilus influenzae*, 893
recombinational repair in yeast, sister chromatids as substrates, 387
repair gene *XRS2*, meiotic recombination, yeast, 651
repeated, natural history of, Berkeley, 1223
sequence analysis of mutations, prolonged starvation, *Salmonella typhimurium*, 303
sequence and repair background, mutational specificity, 1-nitroso-8-nitropyrene in *Escherichia coli*, 911
sequence data
Cladistic analysis, phenotypic associations, 619
estimation, levels of gene flow, 583
simple sequence repeat, length polymorphisms, soybean, 1131
tandemly repetitive, evolution of, recombination rules, 847
DNA topoisomerase I, intergenic spacer repeats, male meiosis, *Drosophila melanogaster*, 529
Dopa decarboxylase, activity variation and linkage disequilibrium, *DdC* gene region, *Drosophila melanogaster*, 443
Drosophila, 755, 1047
Drosophila ananassae, 1039
Drosophila melanogaster, 179, 193, 443, 453, 481, 505, 519, 529, 619, 691, 699, 725, 771, 783, 1033, 1063
Drosophila mulleri, 1071
Drosophila pseudoobscura, 163, 471
Drosophila simulans, 713
Drug resistance, generation of RFLP linkage map, *Toxoplasma gondii*, 1003

Ephrussi, Boris, somatic cell hybridization, chromosome transplantation, 1
Epidermal progenitor cells, *Enhancer of split* complex and adjacent genes, 96F region, *Drosophila melanogaster*, 481
Escherichia coli, 295, 375, 879, 911
Eukaryotic species, heterozygote advantage, evolution, dominant diploid phase, 1195
Evolution
comparative studies, *Drosophila Antennapedia* genes, 453
compensatory advantageous mutations, simulation study, multigene family, 247
consequences, DNA mismatch inhibited repair opportunity, 567
duplicate glyceraldehyde-3-phosphate dehydrogenase genes, *Drosophila*, 789
heterozygote advantage, dominant diploid phase, 1195
models of host-parasite interaction, MHC polymorphism, 863
monomorphic proteins, *Drosophila pseudoobscura*, 163
rates, testing for equality, 269
tandemly repetitive DNA, recombination rules, 847
transformation, DNA repair, *Haemophilus influenzae*, 893
variable rates, Drosophila opsin genes, 193

Fertilization, uniparental cytogamy, *Tetrahymena thermophila*, 1017
Fitness, quantitative traits and, spontaneous mutations, *Drosophila melanogaster*, 771
Flux, *in vivo* differences, electrophoretic variants of G6PD, *Drosophila melanogaster*, 783
Fungi, RIPping and RAPping at Berkeley, 1223

Gadus morhua, 211
β-Galactosidase, yeast kinetochore mutants, 39
Gene
ACT1, systematic mutational analysis, yeast, 337
ADH2
CCR4 protein and leucine-rich repeat region, yeast, 951
characterization, yeast, 351
ectopic expression, *Drosophila mulleri*, 1071
ADH4, spontaneous amplification, yeast, 943
Antennapedia, comparative studies, *Drosophila melanogaster*, 453

compensatory advantageous mutations, simulation study, multigene family, 247
conversion gradient, *HIS4* locus, yeast, 113
cyc1, translation initiation defect, yeast, 97
Ddc, dopa decarboxylase activity, *Drosophila melanogaster*, 443
dosage analysis, *Azotobacter vinelandii*, 869
doublesex or *intersex*, male-specific muscle, *Drosophila melanogaster*, 179
Enhancer of split complex
96F region of *Drosophila melanogaster*, 481
helix-loop-helix proteins, *Drosophila melanogaster*, 505
flow
alcohol dehydrogenase region, *Drosophila pseudoobscura*, 471
estimation of levels, DNA sequence data, 583
GAL1-regulated yeast cDNA expression library, identification of genes, overexpression which causes lethality, 665
homologs of bacterial HexA and MutS mismatch repair proteins, yeast, 963
HTS1, cytoplasmic and mitochondrial histidyl-tRNA synthetase, yeast, 987
hypermutated sequences, germ line variable regions, murine anti-hapten antibodies, 799
introgression breeding programs, use of markers, 1199
MAK10, replication of dsRNA virus, yeast, 87
MSH1 and *MSH2*, insertion mutations, yeast, 975
Mst26A male accessory gland, polymorphism and divergence, *Drosophila*, 755
opsin, variable rates of evolution, *Drosophila melanogaster*, 193
ord mutants, sister-chromatid misbehavior, *Drosophila*, 1047
orthologous seed weight, RFLP mapping, cowpea and mung bean, 841
ovum mutant, mapping to distal portion, mouse chromosome *11*, 241
proboscipedia, ectopic expression, *Antennapedia* P1 control in *Drosophila*, 699
rec7 and *rec8*, meiotic induction, *Schizosaccharomyces cerevisiae*, 75
Rhizobium meliloti, sulfate activation, 899
sexual development, *Neurospora crassa*, 149
Stellate, *X* heterochromatin, *Drosophila melanogaster*, 1033
sup-38, mutations, *Caenorhabditis elegans*, 431
Suppressor of fused, *Drosophila melanogaster*, 725
unc-33, axonal guidance and outgrowth, *Caenorhabditis elegans*, 675
XRS2, meiotic recombination, yeast, 651
Genome
comparative mapping, sorghum and maize, 1119
RIPping and RAPping at Berkeley, 1223
tomato and potato, high-density molecular linkage maps, 1141
use of simulated annealing, chromosome reconstruction, binary scoring, 591
α-Globins, β-globins and, oxygen association-dissociation, mouse hemoglobins, 545
Glucose
N-terminal mutations, yeast SNF1 protein kinase function, 639
-repressible gene *MAK10*, replication, yeast, 87
Glucose-6-phosphate dehydrogenase, electrophoretic variants, *in vivo* flux differences, *Drosophila melanogaster*, 783
Glyceraldehyde-3-phosphate dehydrogenase, duplicate genes in *Drosophila*, evolution, 789

Haemophilus influenzae, DNA repair, evolution of transformation, 893
Haplotype, Cladistic analysis of phenotypic associations, DNA sequence data, 619
Helicase, mutants, mitotic and meiotic defects, yeast, 23
Hemoglobins, mouse, oxygen association-dissociation, stability analysis, 545
Heterochromatin
intrinsic differences, formation of chromatin domains, *Drosophila melanogaster*, 1063
subtelomeric, single *P* element insertional mutagenesis, *Drosophila* minichromosome *Dp1187*, 737
X, copies of *Stellate* gene variant, *Drosophila melanogaster*, 1033
Heterokaryons, rescue of inviable deficiency progeny, combination inversion and translocation, *Neurospora crassa*, 403
Heteroplasmy
mitochondrial DNA length variation, white sturgeon, 221
short tandem repeats, mitochondrial DNA, Atlantic cod, 211
Heterosis, genetic factors, molecular markers, elite maize inbred lines, 823
Histidine, prolonged starvation, sequence analysis of mutations, *Salmonella typhimurium*, 303
Histidyl-tRNA synthetase, cytoplasmic and mitochondrial, *HTS1*, yeast, 987
Hypertriglyceridemia, apoliproprotein B levels and, control of, rabbit genetic model, 1095

Immunoglobulins
light chain constant region, interallelic divergence at *b*-locus, rabbit, 1105
murine anti-hapten antibodies, germ line variable regions, hypermutated sequences in genes, 799
Inbreeding, spontaneous mutations, quantitative traits and fitness, *Drosophila melanogaster*, 771
Integrins, mutant alleles of *myospheroid*, *Drosophila melanogaster*, 519
Introns
duplicate glyceraldehyde-3-phosphate dehydrogenase genes, evolution, *Drosophila*, 789

encoding of ribosomal protein, yeast omnipotent suppressor *SUP46*, 375
Inversion, translocation and, rescue of inviable deficiency progeny of *Neurospora crassa*, heterokaryons, 403

Lethality, *GAL1*-regulated yeast cDNA expression library, 665
Leucine, -rich repeat region, CCR4 protein, *ADH2* gene expression in yeast, 951
Life-span, traits that influence longevity, mouse, 229
Linkage
analysis for quantitative traits, effects of selection, 1177
high-density molecular maps, tomato and potato genomes, 1141
Linkage disequilibrium, dopa decarboxylase activity, *Ddc* gene, *Drosophila melanogaster*, 443
Lipids, control of hypertriglyceridemia and apolipoprotein B, genetic model, rabbits, 1095
Locus
b, interallelic divergence, rabbit, 1105
cyc1, translation initiation defect, yeast, 97
genetic factors contributing to heterosis, two elite maize inbred lines, molecular markers, 823
HIS4, gene conversion gradient, yeast, 113
hypertriglyceridemia and apolipoprotein B levels, control of, rabbit genetic model, 1095
Kn1-O tandem duplication, active *Mutator* elements, increased recombination, 813
multilocus frequency data, inferring selective history, 277
selection during mating type interconversion, distant regulatory signals, yeast, 929
Longevity, traits that influence, mouse, 229

Maize
active *Mutator* elements, increased recombination, *Kn1-O* tandem duplication, 813
sorghum and, comparative genome mapping, 1119
two elite inbred lines, genetic factors contribuing to heterosis, molecular markers, 823
Major histocompatibility complex
female choice and variation, 575
loci, overdominant *vs.* frequency-dependent selection, 861
polymorphism, models, host-parasite interaction, 863
Mammalian cells, double-strand breaks, extrachromosomal recombination, 1081
Mapping
distal portion of chromosome *11*, polar-lethal *ovum mutant* gene, mouse, 241
maximum likelihood, quantitative trait loci, full-sib families, 1211
RFLP, orthologous seed weight genes, cowpea and mung bean, 841
Mating
female choice and variation, major histocompatibility complex, 575
mutants of *Neurospora crassa A*, repeat induced point mutation, 125
sexual development genes, *Neurospora crassa*, 149
type interconversion, donor locus selection, yeast, 929
unorthodox behavior, bacteria, 635
Meiosis
induced *rec7* and *rec8* genes, *Schizosaccharomyces cerevisiae*, 75
male, model for achiasmatic pairing, *Drosophila melanogaster*, 529
mitotic and meiotic defects, yeast DNA helicase mutants, 23
recombination in *Sordaria macrospora*, pairing initiation sites, 135
sister chromatid misbehavior, *Drosophila ord* mutants, 1047
Migration, estimation of levels of gene flow, DNA sequence data, 583
Minichromosome, *Dp1187*, subtelomeric heterochromatin, *Drosophila*, 737
Mitochondria
DNA
heteroplasmy of short tandem repeats, Atlantic cod, 211
length variation and heteroplasmy, white sturgeon, 221
DNA haplotypes, laboratory cage populations, mosquito, 205
histidyl-tRNA synthetase, *HTS1*, yeast, 987
insertion mutations in yeast, *MSH1* and *MSH2* genes, 975
Mosquito, frequencies of mitochondrial DNA haplotypes, laboratory cage populations, 205
Mouse
anti-hapten antibodies, germ line variable regions, hypermutated sequences in genes, 799
hemoglobins, oxygen association-dissociation, stability analysis, 545
polar-lethal *ovum mutant* gene, mapping to distal portion, 241
traits that influence longevity, 229
Mung bean, RFLP mapping, orthologous seed weight genes, 841
Muscle
-attachment defects in *unc-52* mutants, *sup-38* gene, *Caenorhabditis elegans*, 431
male-specific, sex-determining genes, *Drosophila melanogaster*, 179
Mutagenesis
DNA inversions, short inverted repeats, *Escherichia coli*, 295
P element insertional, subtelomeric heterochromatin, *Drosophila* minichromosome *Dp1187*, 737
systematic mutational analysis, *ACT1* gene, yeast, 337
yeast, molecular genetic studies, cdc7 protein ki-

nase, 53
Mutagens, 1-nitroso-8-nitropyrene, DNA sequence and repair, *Escherichia coli*, 911
Mutants
alleles of *myospheroid*, *Drosophila melanogaster*, 519
ord, sister chromatid misbehavior, *Drosophila*, 1047
SPT4/SPT5/SPT6 interactions, transcription and viability, yeast, 325
unicorns revisited, 865
yeast, colony color assay, defects in kinetochore structure and function, 39
Mutations
adaptive reversion in yeast, 9
compensatory advantageous, simulation study, multigene family, 247
deleterious, apparent stabilizing selection, quantitative variation, 603
germ line variable regions, hypermutated sequences in genes, murine anti-hapten antibodies, 799
Hairy-wing, *gypsy*-induced alleles of *forked* and *cut*, *Drosophila melanogaster*, 691
insertion, *MSH1* and *MSH2* genes, yeast, 975
Neurospora crassa A, repeat induced point mutation, 125
N-terminal, modulation, yeast SNF1 protein kinase function, 639
sequence analysis, prolonged starvation, *Salmonella typhimurium*, 303
spontaneous, quantitative traits and fitness, *Drosophila melanogaster*, 771
sup-38 gene of *Caenorhabditis elegans*, 431
uniparental cytogamy, *Tetrahymena thermophila*, 1017

Neurogenesis, *Enhancer of split* complex and adjacent genes, 96F region, *Drosophila melanogaster*, 481
Neurospora crassa, 125, 149, 403
Neutral theory, molecular population genetics, electrophoretically monomorphic protein, *Drosophila pseudoobscura*, 163
1-Nitroso-8-nitropyrene, mutational specificity, DNA sequence and repair, *Escherichia coli*, 911

Oligonucleotides, use of simulated annealing, chromosome reconstruction, binary scoring, 591
Oxygen, association-dissociation and stability analysis, mouse hemoglobins, 545

P element, insertional mutagenesis, subtelomeric heterochromatin, *Drosophila* minichromosome *Dp1187*, 737
Phosphate, sulfate metabolism and, possible cross-regulation, yeast, 63
Plants, paternal cytoplasmic inheritance, pollen and seed migration, cytonuclear structure, 253
Plasmid, linear, multiple copies of its chromosome, *Borrelia hermsii*, 311
Point mutation, RIPping and RAPping at Berkeley, 1223
Pollen, seed migration and, paternal cytoplasmic inheritance, plants, 253
Polymorphism
divergence and, population genetics, 1161
length, simple sequence repeat DNA, soybean, 1131
RFLP linkage map generation, *Toxoplasma gondii*, 1003
Population
dopa decarboxylase activity, *Ddc* gene, *Drosophila melanogaster*, 443
electrophoretically monomorphic protein, *Drosophila pseudoobscura*, 163
gene introgression breeding programs, use of markers, 1199
genetics, polymorphism and divergence, 1161
interallelic divergence at rabbit *b*-locus, immunoglobulin light chain constant region, rabbit, 1105
mitochondrial DNA length variation, heteroplasmy, white sturgeon, 221
paternal cytoplasmic inheritance, pollen and seed migration, plants, 253
prediction of selection response, threshold dichotomous traits, 1187
simulation study of multigene family, compensatory advantageous mutations, 247
Potato, genome, high-density molecular linkage map, 1141
Protein kinase
cdc7, molecular genetic studies, mutagenesis in yeast, 53
SNF1, N-terminal mutations, yeast, 639
Proteoglycan, muscle-attachment defects in *unc-52* mutants, *sup-38* gene, *Caenorhabditis elegans*, 431

Quantitative trait loci
linkage analysis, effects of selection, 1177
maximum likelihood mapping, full-sib families, 1211

Rabbit
genetic model, control, hypertriglyceridemia and apolipoprotein B levels, 1095
interallelic divergence at *b*-locus, immunoglobulin light chain constant region, overdominant selection, 1105
RecBCD enzyme, Chi enhancement, heteroduplex DNA levels, *Escherichia coli*, 879
Receptors, T-cell, yeast *MAK10* gene, 87
Recombination
active *Mutator* elements, *Kn1-O* tandem duplication, 813
Chi enhancement, heteroduplex DNA levels, *Escherichia coli*, 879
chloroplast, nonrandom distribution, *Chlamydomonas reinhardtii*, 413
Cladistic analysis of phenotypic associations, haplo-

types, DNA sequence analysis, 619
DNA polymorphism, fixed between-population differences, centromeric region of *Drosophila ananassae*, 1039
evolution of tandemly repetitive DNA, 847
extrachromosomal, double-strand breaks, mammalian cells, 1081
gene conversion gradient, *HIS4* locus, yeast, 113
meiotic, *XRS2* gene, yeast, 651
meiotically induced *rec7* and *rec8* genes, *Schizosaccharomyces pombe*, 75
molecular population genetics, electrophoretically monomorphic protein, *Drosophila pseudoobscura*, 163
nodules and meiotic recombination, pairing initiation sites, *Sordaria macrospora*, 135
somatic and germinal, direct repeat, *Arabidopsis*, 553
yeast DNA helicase mutants, mitotic and meiotic defects, 23
Retrotransposon, *gypsy*-induced alleles of *forked* and *cut*, *Hairy-wing* mutations, *Drosophila melanogaster*, 691
Reversion, adaptive, yeast, 9
Rhizobium meliloti, genes involved in sulfate activation, 899
Ribosome, encoding fo ribosomal protein, yeast omnipotent suppressor *SUP46*, 375
RNA
double-stranded, replication and *MAK10* gene, yeast, 87
transcriptional, mutant, δ-mediated transcription, yeast, 361

Saccharomyces cerevisiae, 9, 23, 39, 53, 63, 87, 97, 113, 325, 337, 351, 361, 375, 387, 639, 651, 665, 929, 943, 951, 963, 987
Salmonella typhimurium, 303
Schizosaccharomyces pombe, 75
Seed, migration and pollen, paternal cytoplasmic inheritance, plants, 253
Selection
deleterious mutations, quantitative variation, 603
gene introgression breeding programs, use of markers, 1199
inferring selective history, multilocus frequency data, 277
linkage analysis for quantitative traits, 1177
models of host-parasite interaction, MHC polymorphism, 863
overdominant *vs.* frequency-dependent, MHC loci, 861
response for threshold dichotomous traits, 1187
Sex
-determining genes *doublesex* or *intersex*, male-specific muscle, *Drosophila melanogaster*, 179
development, gene of *Neurospora crassa*, 149
Sister chromatids
misbehavior, *Drosophila ord* mutants, 1047
substrates for recombinational repair, yeast, 387
Somatic cells, hybridization, chromosome transplantation, 1
Sordaria macrospora, 135
Sorghum, maize and, comparative genome mapping, 1119
Soybean, simple sequence repeat DNA, length polymorphisms, 1131
Streptococcus pneumoniae, 963
Sturgeon, mitochondrial DNA length variation, heteroplasmy, 221
Sulfate
activation, *Rhizobium meliloti* genes, 899
phosphate metabolism and, possible cross-regulation, yeast, 63
Suppressors
cis- and *trans*-acting, translation initiation defect, yeast, 97
SUP46, encoding of ribosomal protein, yeast, 375
sup-38 gene, *unc-52*, *Caenorhabditis elegans*, 431
Suppressor of fused, *Drosophila melanogaster*, 725
Synaptosomal complex, pairing initiation sites, meiotic recombination, *Sordaria macrospora*, 135

T-cells, yeast *MAK10* gene, 87
Tetrahymena thermophila, uniparental cytogamy, 1017
Thorax, dominant defects with *Antennapedia* P1 control, ectopic expression of *proboscipedia*, *Drosophila*, 699
Tomato, genome, high-density molecular linkage map, 1141
Toxoplasma gondii, generation of RFLP linkage map, 1003
Transcription
characterization of three genes, *ADH2* expression, yeast, 351
δ-mediated, mutant tRNA, yeast, 361
rearrangement of upstream regulatory elements, ectopic expression, *Drosophila mulleri Adh-2* gene, 1071
SPT4/SPT5/SPT6 interactions, viability, yeast, 325
Transduction, bacterial, 291
Transformation, evolution of, DNA repair, *Haemophilus influenzae*, 893
Transplantation, chromosome, somatic cell hybridization, 1
Transposeable elements
active *Mutator* elements, increased recombination, *Kn1-O* tandem duplication, 813
axonal guidance and outgrowth, *unc-33* gene, *Caenorhabditis elegans*, 675
Transposon, gene dosage analysis, *Azobacter vinelandii*, 869
Transversions, testing for equality of evolutionary rates, 269

Unicorns, revisited, 865

Vision, Drosophila opsin genes, variable rates of evolution, 193

Yeast
ACT1 gene, systematic mutational analysis, 337
colony color assay for mutants, defects, kinetochore structure and function, 39
cytoplasmic and mitochondrial histidyl-tRNA synthetase, *HTS1*, 987
donor locus selection, mating type interconversion, distant regulatory signals, 929
examination of adaptive reversion, 9
expression of *ADH2*, gene characterization, 351
GAL1-regulated, cDNA expression library, lethality, 665
HIS4 locus, gene conversion gradient, 113
insertion mutations, *MSH1* and *MSH2* genes, 975
leucine-rich repeat region, *ADH2* gene expression, CCR4 protein, 951
δ-mediated transcription, mutant tRNA, 361
meiotic recombination, *XRS2* gene, 651
mitotic and meiotic defects, DNA helicase mutants, 23
mutagenesis, molecular genetic studies, cdc7 protein kinase, 53
omnipotent suppressor *SUP46*, encoding of ribosomal protein, 375
possible cross-regulation, phosphate and sulfate metabolism, 63
recombinational repair, sister chromatids as substrates, 387
replication of dsRNA virus, *MAK10*, 87
SNF1 protein kinase function, modulation, N-terminal mutations, 639
spontaneous amplification of *ADH4* gene, 943
SPT4/SPT5/SPT6 interactions, transcription and viability, 325
translation initiation defect, *cyc1* locus, *cis*- and *trans*-acting suppressors, 97
two genes encoding homologs, bacterial HexA and MutS mismatch repair proteins, 963
